# Perimetry test report Post treatment Left eye( after 10 days)

# **Review from Patient's mother** **in law**

Dear Dr. Banga, I am writing this review with the deepest gratitude and a heart full of emotions. We visited for our daughter in law Plaksha.

What sets Dr. Banga apart is not just the results, but the care, dedication, and deep knowledge brought to each session. Every session is so intense and he does himself with utmost devotion.

Every visit felt like being in the hands of someone who truly understood the patient's struggle and was tully committed to helping.

He is man of his words. He beforehand gives in written how much relief can come after treatment after analysing reports. He doesn't take full amount at once. He takes fees of only next session. And he clearly states that if improvement doesn't come in the first session he won't treat further. He is exceptionally loyal towards his patients and his work. Salute to him for this.

From the very core of my heart - "thank you" is very less for what you have done, Dr. Banga. You have given something priceless: renewed hope and a better quality of life. I would encourage every RP patient and their family to explore this treatment.

We are forever grateful.

Thank you for changing our life

For anyone living with Retinitis Pigmentosa, you know how relentless the condition can feel - the gradual loss of night vision, the blinding glare, the shrinking peripheral field. We had almost accepted these as inevitable. Then we found Dr. Banga.

Dr. Banga's treatment has brought miraculous improvements. The night vision has improved noticeably. The glare problem has eased significantly. And there is unimaginable relief in peripheral vision as well.

For a condition like RP, where conventional medicine offers so little in terms of symptom relief, this has been nothing short of life-changing.

What sets Dr. Banga apart is not just the results, but the care, dedication, and deep knowledge brought to each session. Every session is so intense and he does himself with utmost devotion.

Every visit felt like being in the hands of someone who truly understood the patient's struggle and was tully committed to helping.
